This document contains the underlying principles and regulations regarding the structure and the operating of the Solactive L&G ESG Index Family (the “Index Family”). Solactive AG (“Solactive”) shall make every effort to implement regulations. Solactive does not offer any explicit or tacit guarantee or assurance, neither pertaining to the results from the use of the Index nor the Index value at any certain point in time nor in any other respect. The Index is merely calculated and published by Solactive and it strives to the best of its ability to ensure the correctness of the calculation. There is no obligation for Solactive – irrespective of possible obligations to issuers – to advise third parties, including investors and/or financial intermediaries, of any errors in the Index. The publication of the Index by Solactive is no recommendation for capital investment and does not contain any assurance or opinion of Solactive regarding a possible investment in a financial instrument based on this Index.

INTRODUCTION

This document is to be used as a guideline with regard to the composition, calculation and management of the Index Family. Any changes made to the guideline are initiated by the Committee specified in section 1.6. The Index is calculated and published by Solactive. The name “Solactive” is trademarked.

1. Index specifications

The Solactive L&G ESG Index Family (the “Index Family”) is an index family provided by Solactive and is calculated and distributed by Solactive.

The indices are designed by Solactive and Legal & General Investment Management (“L&G”) to tilt the parent universe using the process described below in order to increase the exposure to companies with higher L&G ESG scores. The L&G ESG scores are created by L&G using a number of metrics including:

- Environmental
- Social
- Corporate Governance
- Transparency

These metrics are reviewed semi-annually by L&G in order to incorporate the most reliable and relevant inputs when calculating the aggregate L&G ESG Score. Additionally, there is an annual review of the scoring methodology.

The Indices are calculated as a PR, NTR and GTR index.

The Indices are published in GBP or USD.

1.1 Short name and ISIN

The Index Family includes the following indices and is distributed under the below identifiers:

Name	ISIN	RIC	Currency	Return
Solactive L&G ESG North America PR Index	DE000SLA5HD1	.SOESGNAP	GBP	PR
Solactive L&G ESG North America NTR Index	DE000SLA5HE9	.SOESGNAN	GBP	NTR
Solactive L&G ESG North America GTR Index	DE000SLA5HF6	.SOESGNAG	GBP	GTR
Solactive L&G ESG Europe ex UK PR Index	DE000SLA5HG4	.SOESGEUP	GBP	PR
Solactive L&G ESG Europe ex UK NTR Index	DE000SLA5HH2	.SOESGEUN	GBP	NTR
Solactive L&G ESG Europe ex UK GTR Index	DE000SLA5HJ8	.SOESGEUG	GBP	GTR
Solactive L&G ESG UK PR Index	DE000SLA5HK6	.SOESGUKP	GBP	PR
Solactive L&G ESG UK NTR Index	DE000SLA5HL4	.SOESGUKN	GBP	NTR
Solactive L&G ESG UK GTR Index	DE000SLA5HM2	.SOESGUKG	GBP	GTR
Solactive L&G ESG APAC ex Japan PR Index	DE000SLA5HN0	.SOESGAPP	GBP	PR
Solactive L&G ESG APAC ex Japan NTR Index	DE000SLA5HP5	.SOESGAPN	GBP	NTR
Solactive L&G ESG APAC ex Japan GTR Index	DE000SLA5HQ3	.SOESGAPG	GBP	GTR
Solactive L&G ESG Japan PR Index	DE000SLA5HR1	.SOESGJPP	GBP	PR
Solactive L&G ESG Japan NTR Index	DE000SLA5HS9	.SOESGJPN	GBP	NTR
Solactive L&G ESG Japan GTR Index	DE000SLA5HU5	.SOESGJPG	GBP	GTR

Solactive L&G Developed Markets PR Index	DE000SLA6W76	.SOESGDMP	USD	PR
Solactive L&G Developed Markets NTR Index	DE000SLA6W84	.SOESGDMN	USD	NTR
Solactive L&G Developed Markets GTR Index	DE000SLA6W92	.SOESGDMG	USD	GTR
Solactive L&G Developed Markets PR Index GBP	DE000SLA6ZD1	.SOESGDGP	GBP	PR
Solactive L&G Developed Markets NTR Index GBP	DE000SLA6ZE9	.SOESGDGN	GBP	NTR
Solactive L&G Developed Markets GTR Index GBP	DE000SLA6ZF6	.SOESGDGG	GBP	GTR
Solactive L&G Developed Markets ex UK PR Index	DE000SLA6X59	.SOESGDBP	USD	PR
Solactive L&G Developed Markets ex UK NTR Index	DE000SLA6X67	.SOESGDBN	USD	NTR
Solactive L&G Developed Markets ex UK GTR Index	DE000SLA6X75	.SOESGDBG	USD	GTR
Solactive L&G ESG Developed Markets ex UK GBP PR Index	DE000SLA9P80	.SOESDBPP	GBP	PR
Solactive L&G ESG Developed Markets ex UK GBP NTR Index	DE000SLA9QA0	.SOESDBPN	GBP	NTR
Solactive L&G ESG Developed Markets ex UK GBP GTR Index	DE000SLA9P98	.SOESDBPG	GBP	GTR
Solactive L&G ESG Emerging Markets PR Index	DE000SLA7Z56	.SOESGEMP	GBP	PR
Solactive L&G ESG Emerging Markets NTR Index	DE000SLA7Z64	.SOESGEMN	GBP	NTR
Solactive L&G ESG Emerging Markets GTR Index	DE000SLA7Z72	.SOESGEMG	GBP	GTR
Solactive L&G ESG Global Markets PR Index	DE000SLA9LR5	.SOESGGMP	GBP	PR
Solactive L&G ESG Global Markets NTR Index	DE000SLA9LS3	.SOESGGMN	GBP	NTR
Solactive L&G ESG Global Markets GTR Index	DE000SLA9LU9	.SOESGGMT	GBP	GTR

1.2 Initial value

The Index is based on 100 at the close of trading on the start date May 2nd, 2012 for all indices except for Solactive L&G ESG Emerging Markets Index and the Solactive L&G Global Markets Index, which are based on 100 at the close of trading on May 8th, 2017.

1.3 Distribution

The Index is published via the price marketing services of Boerse Stuttgart AG and is distributed to all affiliated vendors. Each vendor decides on an individual basis as to whether they will distribute/display the Index via their information systems.

1.4 Prices and calculation frequency

The price of the Index is calculated on each Business Day based on the prices on the respective Exchanges on which the Index Components are listed. The most recent prices of all Index Components are used. Prices of Index

Components not listed in the Index Currency are translated using spot foreign exchange rates quoted by Reuters. Should there be no current price available on Reuters, the most recent price or the Trading Price on Reuters for the preceding Trading Day is used in the calculation.

The Index is calculated every Business Day from 9:00am to 10:30pm, CET. In the event that data cannot be provided to Reuters or to the pricing services of Boerse Stuttgart AG the Index cannot be distributed.

1.5 Weighting

On each Adjustment Day each Index Component of the Index is weighted based on the process described below in Section 2.1.

1.6 Decision-making bodies

A Committee composed of staff from Solactive is responsible for decisions regarding the composition of the Index as well as any amendments to the rules (in this document referred to as the "Committee" or the "Index Committee"). The future composition of the Index is determined by the Committee on the Selection Days according to the procedure outlined in 2.1 of this document. The Committee shall also decide about the future composition of the Index in the event that any Extraordinary Events should occur and the implementation of any necessary adjustments.

Members of the Committee can recommend changes to the guideline and submit them to the Committee for approval.

1.7 Publication

All specifications and information relevant for calculating the Index are made available on the <http://www.solactive.de> web page and sub-pages.

1.8 Historical data

Historical data will be maintained from the launch of the Family on May 23rd, 2018.

The Solactive L&G Developed Markets Index has been launched on the 22nd of October 2018.

The Solactive L&G Emerging Markets Index has been launched on the 23rd of May 2019.

The Solactive L&G Global Markets Index has been launched on the 17th of October 2019.

1.9 Licensing

Licences to use the Index as the underlying value for derivative instruments are issued to stock exchanges, banks, financial services providers and investment houses by Solactive.

2 Composition of the Index

2.1 Selection of the Index Components

The initial composition of the Index as well as any ongoing adjustment is based on the following rules:

On each Selection Day, Solactive determines the weights of each component in each Index following the below steps.

A. Regional and Country Indices

1. For each regional or country index, except the UK, we start with the universe of stocks included in the Solactive GBS Developed Markets Large & Mid Cap Index (the “Original Index”) and remove any securities on the L&G Future World Protection List.
 - a. The L&G Future World Protection List includes: i) companies that are involved in, and/or derive revenues from controversial weapons; ii) pure coal mining companies, and iii) certain companies that do not comply with the United Nations Global Compact screening criteria.
2. Each security will then be attributed to one region or country based on Solactive’s Country Assignment procedure which is described in more detail in this [methodology](#). These regions/countries we are looking at include North America, Europe ex UK, APAC ex Japan, Japan and Emerging Markets.
3. For the UK focused index, the Solactive GBS United Kingdom All Cap Index will be used, rather than the UK assigned stocks from the Developed Markets Large & Mid Cap Index.
4. Using the remaining pools of securities in each region/country, the weights of these securities are determined, by tilting the weights as determined based on the free-float market capitalization within this determined pool using the following function:

$$w_{adj,i} = w_{mcap,i} \cdot (1 + ESG\ Score_i)^2$$

where:

$w_{adj,i}$ is the adjusted weight of security i

w_{mcap} is the market capitalisation weight of security i in the cell

$ESG\ Score_i$ is the L&G ESG Score.

The adjusted stocks weights should be re-scaled such that the sum of the Index is equal to 1.

5. The obtained weights are then modified in such a way as to fulfil the requirements below:
 - a. The weight of any sector should be not higher than +2% and not lower than -3% from the weight of the same sector within the Original Index; and
 - b. The individual weight of any security should not differ more than 3% from and not exceed 20 times the weight as determined on free float market capitalization (except for the securities which are removed from the index, these will always receive a weight of zero in the final Index).

B. Global Index

1. In addition to the regional and country indices above, the same weight tilting process is applied to the Solactive GBS United Kingdom Large& Mid Cap Index. The resulting composition and weights

after the weight capping procedure are used for the creation of the Solactive L&G ESG Developed Markets Index (the “Developed Markets Index”), Solactive L&G ESG Developed Markets ex UK Index (the “Developed Markets ex UK Index”) as well as the Solactive L&G ESG Global Markets Index (the “Global Markets Index”).

2. The Developed Markets, the Developed Markets ex UK as well as Global Markets indices are constructed by the aggregation of the composition of each regional and country index as described in the table below.

Aggregated Index	Constituent Index
Solactive L&G Developed Markets Index	Solactive L&G ESG North America Index
	Solactive L&G ESG Europe ex UK Index
	Solactive L&G ESG UK Large&Mid Index
	Solactive L&G ESG APAC ex Japan Index
	Solactive L&G ESG Japan Index
Solactive L&G Developed Markets ex UK Index	Solactive L&G ESG North America Index
	Solactive L&G ESG Europe ex UK Index
	Solactive L&G ESG APAC ex Japan Index
	Solactive L&G ESG Japan Index
Solactive L&G ESG Global Markets Index	Solactive L&G ESG North America Index
	Solactive L&G ESG Europe ex UK Index
	Solactive L&G ESG UK Large&Mid Index
	Solactive L&G ESG APAC ex Japan Index
	Solactive L&G ESG Japan Index
	Solactive L&G ESG Emerging Markets Index

The final weight of each component in the Developed Markets, Developed Marketed ex UK and the Global Markets indices is determined based on the tilted and rescaled weight of each component in the regional or country index as determined in Point A.5 as well as the weight of the respective region or country in the Solactive GBS Developed Markets Large & Mid Cap Index, the Solactive GBS Developed Markets ex United Kingdom Large & Mid Cap Index or the Solactive GBS Global Markets Large & Mid Cap Index, respectively, on the Selection Day.

$$w_{aggregated,i} = w_{adj,i} * w_{reg/country}$$

Where:

$w_{aggregated,i}$ – final weight of security i in the relevant aggregated index

$w_{adj,i}$ – score adjusted weight of security i in the relevant country or regional index

$w_{reg/country}$ - the weight of the region/country that security i is assigned to in the relevant aggregated index

2.2 Ordinary adjustment

The composition of the Index is adjusted on a semi-annual basis on every first Wednesday of May and November. The composition of the Index is reviewed on the Selection Day, which falls 20 business days prior to the Adjustment Day, and necessary changes are announced.

The first adjustment will be made in November 2018 based on the Trading Prices of the Index Components on the Adjustment Day.

Solactive shall publish any changes made to the Index composition on the Selection Day and consequently with sufficient notice before the Adjustment Day.

2.3 Extraordinary adjustment

An extraordinary adjustment, if applicable, is triggered and applied in compliance with the rules set forth in the [Solactive Guideline for Extraordinary Corporate Actions](#).

3 Calculation of the Index

3.1 Index formula

The Index Value on a Business Day at the relevant time is calculated in accordance with the following formula:

$$Index_t = \sum_{i=1}^n \frac{(x_{i,t} * p_{i,t} * f_{i,t})}{D_t}$$

With:

$x_{i,t}$	= Number of Index Shares of the Index Component i on Trading Day t
$p_{i,t}$	= Price of Index Component i on Trading Day t
$f_{i,t}$	= Foreign exchange rate to convert the Price of Index Component i on Trading Day t into the Index Currency
D_t	= Divisor on Trading Day t

The initial Divisor on the Start Date is calculated according to the following formula:

$$D_t = \frac{\sum_{i=1}^n (p_{i,t} * f_{i,t} * x_{i,t})}{100}$$

After the close of trading on each Adjustment Day t the new Divisor is calculated as follows:

$$D_{t+1} = \frac{\sum_{i=1}^n (p_{i,t} * f_{i,t} * x_{i,t+1})}{Index_t}$$

This Divisor is valid starting the immediately following Business Day.

3.2 Accuracy

The value of the Index will be rounded to 2 decimal places.

Trading Prices and foreign exchange rates will be rounded to six decimal places.

Divisors will be rounded to six decimal places

3.3 Adjustments

Indices need to be adjusted for systematic changes in prices once these become effective. This requires the new Number of Index Shares of the affected Index Component and the Divisor to be calculated on an ex-ante basis.

Following the Committee's decision, the Index is adjusted for distributions, capital increases and stock splits.

This procedure ensures that the first ex quote can be properly reflected in the calculation of the Index. This ex-ante procedure assumes the general acceptance of the Index calculation formula as well as open access to the parameter values used. The calculation parameters are provided by the Index Calculator.

3.4 Dividends and other distributions

Dividend payments and other distributions are included in the Index. They cause an adjustment of the Divisor. The new Divisor is calculated as follows:

$$D_{t+1} = D_t * \frac{\sum_{i=1}^n (p_{i,t} * f_{i,t} * x_{i,t}) - (x_{i,t} * y_{i,t} * g_{i,t})}{\sum_{i=1}^n (p_{i,t} * f_{i,t} * x_{i,t})}$$

With:

$p_{i,t}$	= Price of Index Component i on Trading Day t
$f_{i,t}$	= Foreign exchange rate to convert the Price of Index Component i on Trading Day t into the Index Currency
$x_{i,t}$	= Number of Index Shares of the Index Component i on Trading Day t
$y_{i,t}$	= Distribution of Index Component i with ex-date $t+1$ multiplied by the Dividend Correction Factor
$g_{i,t}$	= Foreign exchange rate to convert the amount of the distribution of Index Component i on Trading Day t into the Index Currency
D_t	= Divisor on Trading Day t
D_{t+1}	= Divisor on Trading Day $t+1$

3.5 Corporate actions

3.5.1 Principles

Following the announcement by an issuer of Index Components of the terms and conditions of a corporate action the Index Calculator determines whether such corporate action has a dilutive, concentrative or similar effect on the price of the respective Index Component.

If this should be the case the Index Calculator shall make the necessary adjustments that are deemed appropriate in order to take into account the dilutive, concentrative or similar effect and shall determine the date on which this adjustment shall come into effect.

Amongst other things the Index Calculator can take into account the adjustment made by an Affiliated Exchange as a result of the corporate action with regard to option and futures contracts on the respective share traded on this Affiliated Exchange.

3.5.2 Capital increases

In the case of capital increases with ex date $t+1$ the Index is adjusted as follows:

$$x_{i,t+1} = x_{i,t} * \frac{1 + B}{1}$$

With:

$x_{i,t+1}$	= Number of Index Shares of Index Component i on Trading Day $t+1$
$x_{i,t}$	= Number of Index Shares of Index Component i on Trading Day t
B	= Shares received for every share held

$$p_{i,t+1} = \frac{p_{i,t} + s * B}{1 + B}$$

With:

$p_{i,t+1}$	= Hypothetical Price of Index Component i on Trading Day $t+1$
$p_{i,t}$	= Price of Index Component i on Trading Day t
s	= Subscription Price in the Index Component currency
B	= Shares received for every share held

$$D_{t+1} = D_t * \frac{\sum_{i=1}^n (p_{i,t} * f_{i,t} * x_{i,t}) + \sum_{i=1}^n [(x_{i,t+1} * p_{i,t+1} * f_{i,t}) - (x_{i,t} * p_{i,t} * f_{i,t})]}{\sum_{i=1}^n (p_{i,t} * f_{i,t} * x_{i,t})}$$

With:

$D_{i,t+1}$	= Divisor on Trading Day t+1
$D_{i,t}$	= Divisor on Trading Day t
$p_{i,t}$	= Price of Index Component i on Trading Day t
$f_{i,t}$	= Foreign exchange rate to convert the Price of Index Component i on Trading Day t into the Index Currency
$x_{i,t}$	= Number of Index Shares of the Index Component i on Trading Day t
$p_{i,t+1}$	= Hypothetical price of Index Component i on Trading Day t+1
$x_{i,t+1}$	= Number of Index Shares of the Index Component i on Trading Day t+1

3.5.3 Share splits

In the case of share splits with ex-date on Trading Day t+1 it is assumed that the prices change in ratio of the terms of the split. The new Number of Index Shares is calculated as follows:

$$x_{i,t+1} = x_{i,t} * B$$

With:

$x_{i,t+1}$	= Number of Index Shares of the affected Index Component on Trading Day t+1
$x_{i,t}$	= Number of Index Shares of the affected Index Component on Trading Day t
B	= Shares after the share split for every share held before the split

3.5.4 Stock distributions

In the case of stock distributions with ex-date on Trading Day t+1 it is assumed that the prices change according to the terms of the distribution. The new Number of Index Shares is calculated as follows:

$$x_{i,t+1} = x_{i,t} * (1 + B)$$

With:

$x_{i,t+1}$	= Number of Index Shares of the affected Index Component on Trading Day t+1
$x_{i,t}$	= Number of Index Shares of the affected Index Component on Trading Day t
B	= Shares received for every share held

3.6 Miscellaneous

3.6.1 Recalculation

Solactive makes the greatest possible efforts to accurately calculate and maintain its indices. However, the occurrence of errors in the index determination process cannot be ruled out. In such cases Solactive adheres to its publicly available [Correction Policy](#).

3.6.2 Market Disruption

In periods of market stress Solactive calculates its indices following predefined and exhaustive arrangements set out in its publicly available [Disruption Policy](#).

4. Definitions

“**Adjustment Day**” is the first Wednesday in May and November. If that day is not an Eligible Rebalancing Day, the Adjustment Day will be the following Eligible Rebalancing Day.

An “**Affiliated Exchange**” is with regard to an Index Component an exchange, a trading or quotation system on which options and futures contracts on the Index Component in question are traded, as specified by the Index Calculator.

A “**Business Day**” is any day from Monday to Friday.

“**Dividend Correction Factor**” is calculated as 1 minus the applicable withholding tax rate and/or other applicable tax rate currently prevalent in the respective country.

“**Eligible Rebalancing Day**” is each day that is a Trading Day at the New York Stock Exchange, the London Stock Exchange, the EUREX Exchange and the Tokyo Stock Exchange.

“**Exchange**” is, in respect of Index and every Index Component, the respective primary exchange where the Index Component has its primary listing. The Committee may decide to declare a different stock exchange the “Exchange” for trading reasons, even if the company is only listed there via a Stock Substitute.

In particular an “**Extraordinary Event**” is

- a Merger
- a Takeover bid
- a delisting
- the Nationalisation of a company
- Insolvency.

The Trading Price for this Index Component on the day the event came into effect is the last available market price for this Index Component quoted on the Exchange on the day the event came into effect (or, if a market price is not available for the day the event came into effect, the last available market price quoted on the Exchange on a day specified as appropriate by the Index Calculator), as determined by the Index Calculator, and this price is used as the Trading Price of the particular Index Component until the end of the day on which the composition of the Index is next set.

In the event of the Insolvency of an issuer of an Index Component the Index Component shall remain in the Index until the next Adjustment Day. As long as a market price for the affected Index Component is available on a Business Day, this shall be applied as the Trading Price for this Index Component on the relevant Business Day, as determined in each case by the Index Calculator. If a market price is not available on a Business Day the Trading Price for this Index Component is set to zero. The Committee may also decide to eliminate the respective Index Component at an earlier point in time prior to the next Adjustment Day. The procedure in this case is identical to an elimination due to and Extraordinary Event.

An Index Component is “**delisted**” if the Exchange announces pursuant to the Exchange regulations that the listing of, the trading in or the issuing of public quotes on the Index Component at the Exchange has ceased immediately or will cease at a later date, for whatever reason (provided delisting is not because of a Merger or a Takeover bid), and the Index Component is not immediately listed, traded or quoted again on an exchange, trading or listing system, acceptable to the Index Calculator,

The “**Index Calculator**” is Solactive or any other appropriately appointed successor in this function.

“**Index Component**” is each share currently included in the Index.

The “**Index Currency**” is GBP or USD.

“**Insolvency**” occurs with regard to an Index Component if (A) all shares of the respective issuer must be transferred to a trustee, liquidator, insolvency administrator or a similar public officer as result of a voluntary or

compulsory liquidation, insolvency or winding-up proceedings or comparable proceedings affecting the issuer of the Index Components or (B) the holders of the shares of this issuer are legally enjoined from transferring the shares.

“Market Capitalization” is with regard to each of the shares in the universe on a Selection Day or Adjustment Day the value published as the Market Capitalization for this day.

As at the date of this document Market Capitalization is defined as the value of a company calculated by multiplying the number of shares outstanding of the company by its share price.

A **“Market Disruption Event”** occurs if

1. one of the following events occurs or exists on a Trading Day prior to the opening quotation time for an Index Component:
 - A) trading is suspended or restricted (due to price movements that exceed the limits allowed by the Exchange or an Affiliated Exchange, or for other reasons):
 - 1.1. across the whole Exchange; or
 - 1.2. in options or futures contracts on or with regard to an Index Component or an Index Component that is quoted on an Affiliated Exchange; or
 - 1.3. on an Exchange or in a trading or quotation system (as determined by the Index Calculator) in which an Index Component is listed or quoted; or
 - B) an event that (in the assessment of the Index Calculator) generally disrupts and affects the opportunities of market participants to execute on the Exchange transactions in respect of a share included in the Index or to determine market values for a share included in the Index or to execute on an Affiliated Exchange transaction with regard to options and futures contracts on these shares or to determine market values for such options or futures contracts; or
2. trading on the Exchange or an Affiliated Exchange is ceased prior to the usual closing time (as defined below), unless the early cessation of trading is announced by the Exchange or Affiliated Exchange on this Trading Day at least one hour before
 - (aa) the actual closing time for normal trading on the Exchange or Affiliated Exchange on the Trading Day in question or, if earlier.
 - (bb) the closing time (if given) of the Exchange or Affiliated Exchange for the execution of orders at the time the quote is given.

“Normal exchange closing time” is the time at which the Exchange or an Affiliated Exchange is normally closed on working days without taking into account after-hours trading or other trading activities carried out outside the normal trading hours; or
3. a general moratorium is imposed on banking transactions in the country in which the Exchange is resident if the above-mentioned events are material in the assessment of the Index Calculator, whereby the Index Calculator makes his decision based on those circumstances that he considers reasonable and appropriate.

With regard to an Index Component a **“Merger”** is

- (i) a change in the security class or a conversion of this share class that results in a transfer or an ultimate definite obligation to transfer all the shares in circulation to another legal person,
- (ii) a merger (either by acquisition or through forming a new structure) or a binding obligation on the part of the issuer to exchange shares with another legal person (except in a merger or share exchange under which the issuer of this Index Component is the acquiring or remaining company and which does not involve a change in security class or a conversion of all the shares in circulation),
- (iii) a takeover offer, exchange offer, other offer or another act of a legal person for the purposes of acquiring or otherwise obtaining from the issuer 100% of the shares issued that entails a transfer or the irrevocable obligation to transfer all shares (with the exception of shares which are held and controlled by the legal person), or
- (iv) a merger (either by acquisition or through forming a new structure) or a binding obligation on the part of the issuer of the share or its subsidiaries to exchange shares with another legal person, whereby the issuer of the share is the acquiring or remaining company and it does not involve a change in the class or a conversion of the all shares issued, but the shares in circulation directly prior to such an event (except for shares held and controlled by the legal person) represent in total less than 50% of the shares in circulation directly subsequent to such an event.

The “**Merger Date**” is the date on which a Merger is concluded or the date specified by the Index Calculator if such a date cannot be determined under the law applicable to the Merger.

“**Nationalisation**” is a process whereby all shares or the majority of the assets of the issuer of the shares are nationalised or are expropriated or otherwise must be transferred to public bodies, authorities or institutions.

“**Percentage Weight**” of an Index Component is the ratio of its Trading Price multiplied by its Number of Shares divided by the Index value and the Divisor.

“**Selection Day**” is the Business Day falling 20 week days before the Adjustment Day.

A “**Takeover bid**” is a bid to acquire, an exchange offer or any other offer or act of a legal person that results in the related legal person acquiring as part of an exchange or otherwise more than 10% and less than 100% of the voting shares in circulation from the issuer of the Index Component or the right to acquire these shares, as determined by the Index Calculator based on notices submitted to public or self-regulatory authorities or other information considered by the Index Calculator to be relevant.

“**Total Shares**” is in respect of an Index Component and any given Business Day the number or fraction of shares included in the Index. It is calculated for any Index Component as the ratio of (A) the Percentage Weight of an Index Component multiplied by the Index value and the Divisor and (B) its Trading Price (converted into the index currency according to the principles laid out in Section 1.4 of this document).

A “**Trading Day**” is in relation to the Index or an Index Component a Trading Day on the Exchange (or a day that would have been such a day if a market disruption had not occurred), excluding days on which trading may be ceased prior to the normal Exchange closing time. The Index Calculator is ultimately responsible as to whether a certain day is a Trading Day with regard to the Index or an Index Component or in any other connection relating to this document.

With regard to an Index component (subject to the provisions given above under “Extraordinary Events”) the “**Trading Price**” in respect of a Trading Day is the closing price on this Trading Day determined in accordance with the Exchange regulations. If the Exchange has no closing price for an Index Component, the Index Calculator shall determine the Trading Price and the time of the quote for the share in question in a manner that appears reasonable to him.

5.2 Calculation of the Index – change in calculation method

The application by the Index Calculator of the method described in this document is final and binding. The Index Calculator shall apply the method described above for the composition and calculation of the Index. However, it cannot be excluded that the market environment, supervisory, legal, financial or tax reasons may require changes to be made to this method. The Index Calculator may also make changes to the terms and conditions of the Index and the method applied to calculate the Index, which he deems to be necessary and desirable in order to prevent obvious or demonstrable error or to remedy, correct or supplement incorrect terms and conditions. The Index Calculator is not obliged to provide information on any such modifications or changes. Despite the modifications and changes the Index Calculator will take the appropriate steps to ensure a calculation method is applied that is consistent with the method described above.
